

CASTALDI

APERIO projecting / APERIO rotating, Italy

APERIO Projecting

APERIO spreads its light out as it comes out of the wall.

The projecting version features a swiveling motion system hinged on the lower base. The upper part of the light fixture protrudes by a maximum of 43mm.

APERIO Rotating

APERIO spreads its light out as it rotates.

The rotating version features a rotational movement around its vertical axis, with a mechanical limit switch at +50° and -50° of rotation.

APERIO represents the most modern contribution to interior lighting. Thanks to its high technological content, its large size (over 2.6 m high), its ability to convey both light and movement at the same time, it stands out as the newest way of representing light indoors. The result of a collaboration between Castaldi Lighting and Studio A++, this innovative project is a source of emotion and excitement. When switched on, Aperia progressively spreads out its light as it comes out of the wall, leaving a trail of light behind. When switched off, it folds away and disappears into the wall.
