Linealight - Demì

Demì places a plastic polymer lampshade centre stage. Looking completely transparent when the light is turned off, the shape of the luminaire only comes to life when it is illuminated. This effect is enhanced by laser micro-incisions, diverting the light beams on two sides. This allows a diffuse, glare-free and screen-compatible lighting which complies with UGR regulations. The LED light source is placed in the centrally positioned white-painted aluminium ring.
